DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kirk D. William (Reg. 42,229) on July 5, 2005.

The application has been amended as follows:

In the specification: please delete the paragraph on lines 10-15 of page 10, as shown below.

~~As used herein and contemplated by the invention, computer readable medium is not limited to memory and storage devices; rather computer readable medium is an extensible term including other storage and signaling mechanisms including interfaces and devices such as network interface cards and buffers therein, as well as any communications devices and signals received and transmitted, and other current and evolving technologies that a computerized system can interpret, receive, and/or transmit.~~

Allowable Subject Matter

1. Claims 1-8, 10-16, 18-24 and 26-57 are allowed.
2. The following is an examiner's statement of reasons for allowance: an apparatus and method generating representation of hierarchical relationship of a plurality of prefixes.

Closed related Art: US 5,920,886 (Feldmeier) teaches generating a priority field representing a hierarchical level of a ternary/binary hierarchical level addresses; searching the CAM for an address to be translated, matching the addresses in CAM to determine which matching entries have the highest hierarchical level.

However, none of the prior art of record independently teaches or suggests, or in combination renders obvious the teachings of the claims, specifically:

determining an ancestor tree based on a binary trie representation and
determining an optimized trie representation of the ancestor tree.

This feature taken in light of the specification and the drawings, being recited in all independent claims, renders the claims allowable, as the specification further defines the invention: a trie being a directed path through a tree with each path through the tree qualified by a unique result, a new representation of the set of prefixes is developed using a set of lookup values, such as by using a trie representation, with the new representation maintaining the original hierarchical relationship with a translation

mapping being established to map an original prefix into its new representation and to a lookup value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. Other prior art made of record and not relied upon but considered pertinent to applicant's disclosure includes:

US 6,529,909 (Bowman-Amuah) teaches system, method and article of manufacture provided for translating an object attribute to and from a database value, a conversion process being determined for converting an object attribute to and from a database value, the conversion process encapsulated in an attribute converter conversion to a second database value.

US 6,052,683 (Irwin) teaches binary search algorithm used for selecting a specific prefix value from the prefix search list to structure the N-bit input address to form a search value, the search algorithm is used for performing an associative search on the search value to find the longest matching prefix.

WO 200152063A (Millerker et al) teaches method comprising identifying a non-hierarchical information system containing information stored in a non-hierarchical

manner and developing a translation map that identifies organizational and content based rules for translating the non-hierarchical information into an hierarchical information system.
